

7th Heidelberg International Symposium on High-Energy Gamma-Ray Astronomy

Contribution ID: 346

Type: **Review, Highlight, or Invited talk**

Status of LST project

Friday, 8 July 2022 10:10 (20 minutes)

Thanks to their large reflectors and improved photon collection efficiency, the Large-Sized Telescopes (LSTs) of the Cherenkov Telescope Array (CTA) target the lowest gamma-ray energies observable from the ground, down to 20 GeV. A four LST sub-array is currently under construction at the CTA-North site of La Palma (Spain). The first LST, LST1, in fact was already inaugurated in 2018. I will report on the progress of the LST project in general and review the early science that LST1 is delivering during its commissioning phase.

Primary authors: CORTINA, Juan (CIEMAT); CTA-LST PROJECT

Presenter: CORTINA, Juan (CIEMAT)

Session Classification: Invited Talks (Aula Magna Biologia) Chair: Stefano Vercellone
