India: Climate challenges and opportunities for astronomy and space sciences

Friday, 2 December 2022 11:00 (30 minutes)

The aim of this workshop is to have a conversation about the problems and solutions for sustainability and climate change in the context of India. We invite discussions from members of both the astronomy and space science disciplines, since these are both relatively small communities in India, yet they share a common mindset of working together on global problems. The major talking points include, but are not limited to

1. How are the challenges concerning climate change different for developing countries like India compared to the West? What are the potential solutions for these different challenges?
2. How can astronomy and space sciences be used to promote climate action in India?

To take part in this workshop, join it via Google Meet: <https://meet.google.com/ajc-vqqo-mbn>

Presenters: BHAMBHANI, Pankaj (Stargazing India, CIBO Technologies); SHARMA, Sakshi

Session Classification: Workshop
