

COSMOLOGICAL GRAVITATIONAL WAVE BACKGROUND:

From theoretical modeling to detection prospects

JACOPO FUMAGALLI (ICCUB)

WINTER MEETING

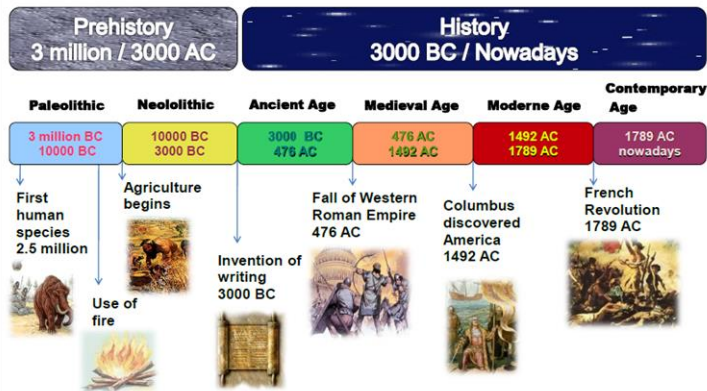

6TH February 2022

Institut de Ciències del Cosmos
UNIVERSITAT DE BARCELONA

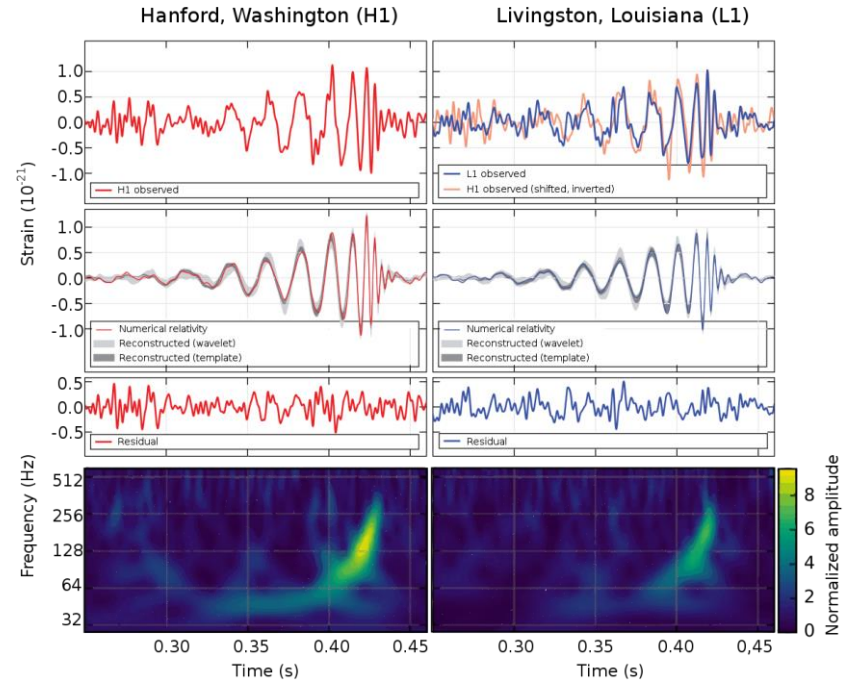

COSMIC ARCHAEOLOGY

COSMIC ARCHAEOLOGY with GWs

GW150914 - The first direct detection of gravitational waves ...

COSMIC ARCHAEOLOGY: SNAPSHOTS

UNKNOWN PHYSICS

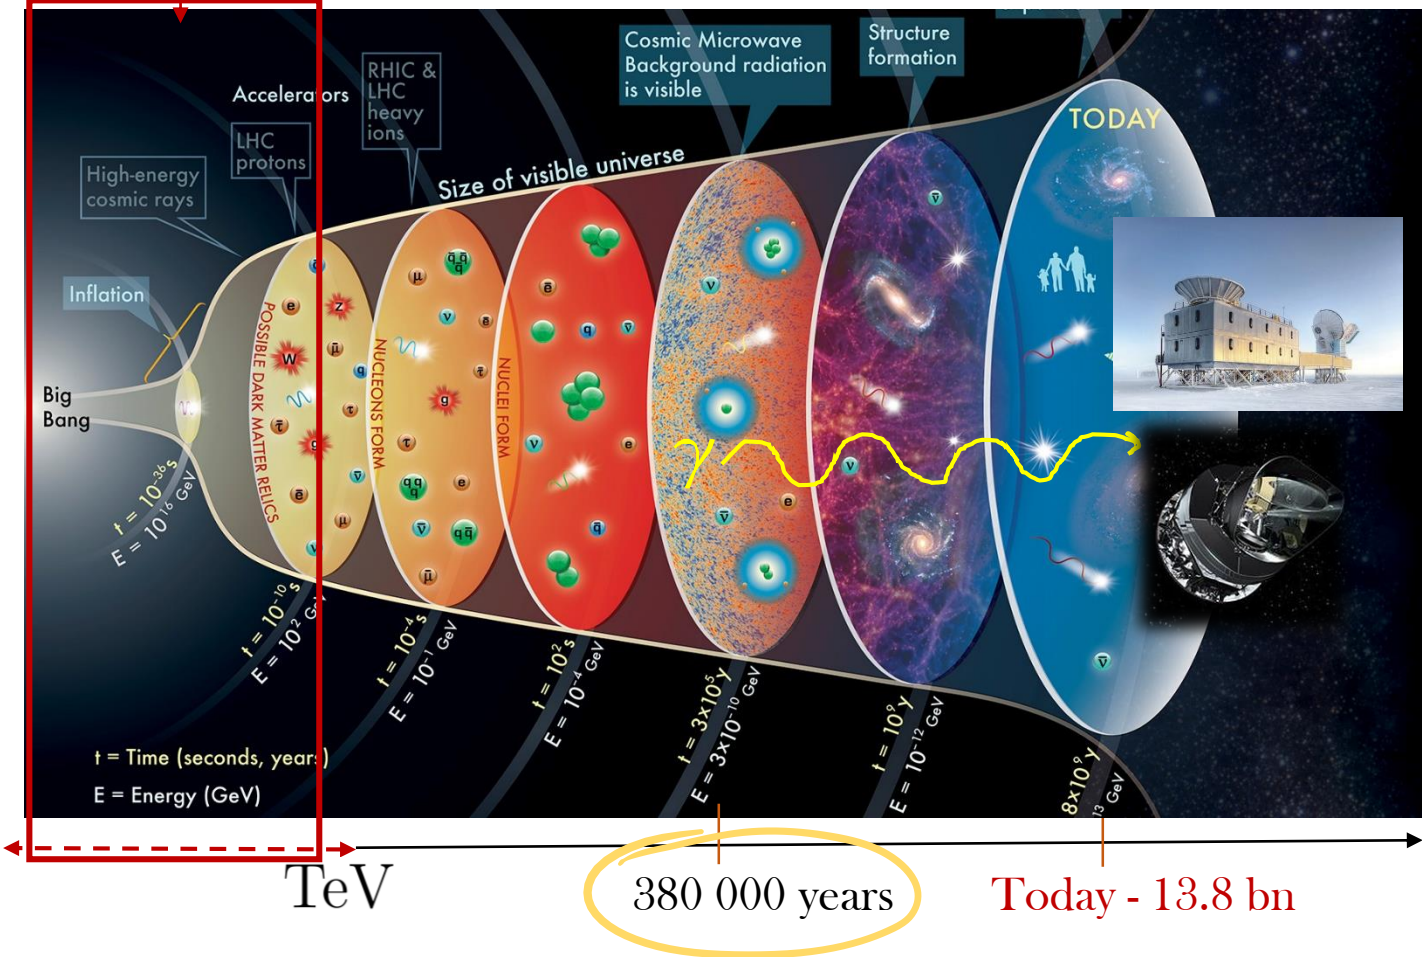

Decoupling: $\Gamma \simeq H$

COSMIC ARCHAEOLOGY: SNAPSHOTS

Decoupling: $\Gamma \simeq H$

COSMIC ARCHAEOLOGY: SNAPSHOTS

UNKNOWN PHYSICS

Decoupling: $\Gamma \simeq H$

Gravitons keep memory of the very early universe!

STOCHASTIC BACKGROUND OF GWS

Caprini and Figueroa '18

- Angular size on the sky (today) of a correlated region at the time of production \ll detector resolution

For instance, EW phase transition

$$T_{EW} \sim O(10^2) \text{ GeV}$$

$$\implies 10^{24} \text{ uncorrelated regions}$$

with resolution $\Theta_{Res} \sim 10 \text{ deg}$

$$\implies z \lesssim 17$$

- Characteristic frequency associated to the time of production/experiment

- $h_{ij} \longleftrightarrow$ STOCHASTIC VARIABLE

$$\Omega_{GW}(k) = \frac{1}{\rho_c} \frac{d\rho_{GW}}{d \ln k}$$

STOCHASTIC BACKGROUND OF GWS

STOCHASTIC BACKGROUND OF GWS

Random signal produced by many independent and unresolved sources

- **ASTROPHYSICAL**
CBCS, CORE COLLAPSE SUPERNOVAE, EARLY INSPIRAL PHASE OF COMPACT BINARIES...
- **COSMOLOGICAL**
EARLY UNIVERSE PROCESSES:
INFLATION, FIRST ORDER PHASE TRANSITIONS, TOPOLOGICAL DEFECTS..

Searches in ground (LVK) and future space interferometers (LISA etc.)

SGWB FROM INFLATION: the Holy Grail of Theoretical cosmology

Standard: enhancement of the vacuum fluctuations due to the inflationary exp. Expansion

$$\square h_{ij} = 0$$

$$\frac{2}{\pi} \frac{H^2}{M_{\text{pl}}^2} n_T \simeq -2\epsilon$$

Too tiny to be seen directly in future GW detector !

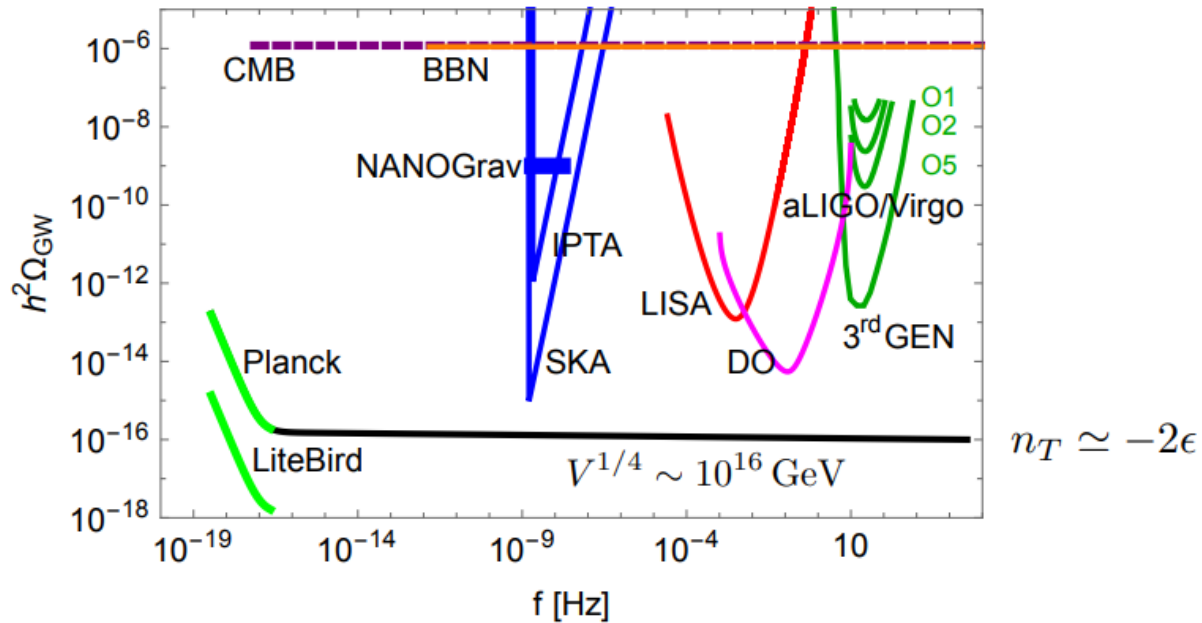

SGWB FROM INFLATION

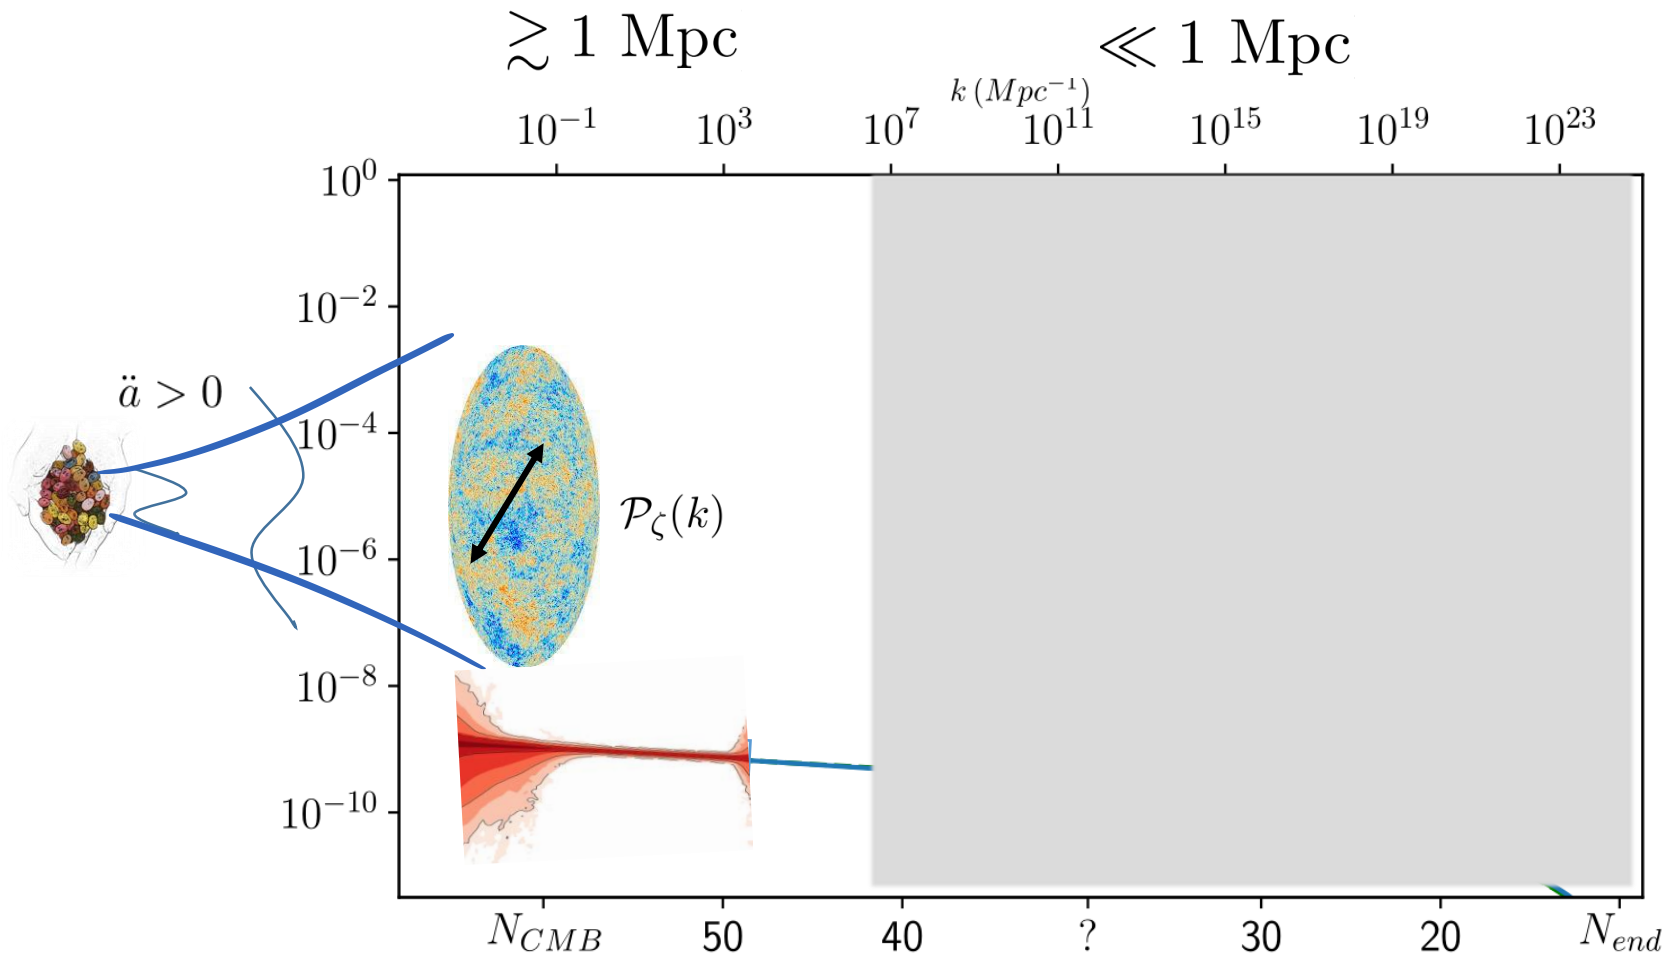

Tensor sourced at second order (or adding extra fields etc.)...

$$\square h_{ij} = S_{ij}^{TT}$$

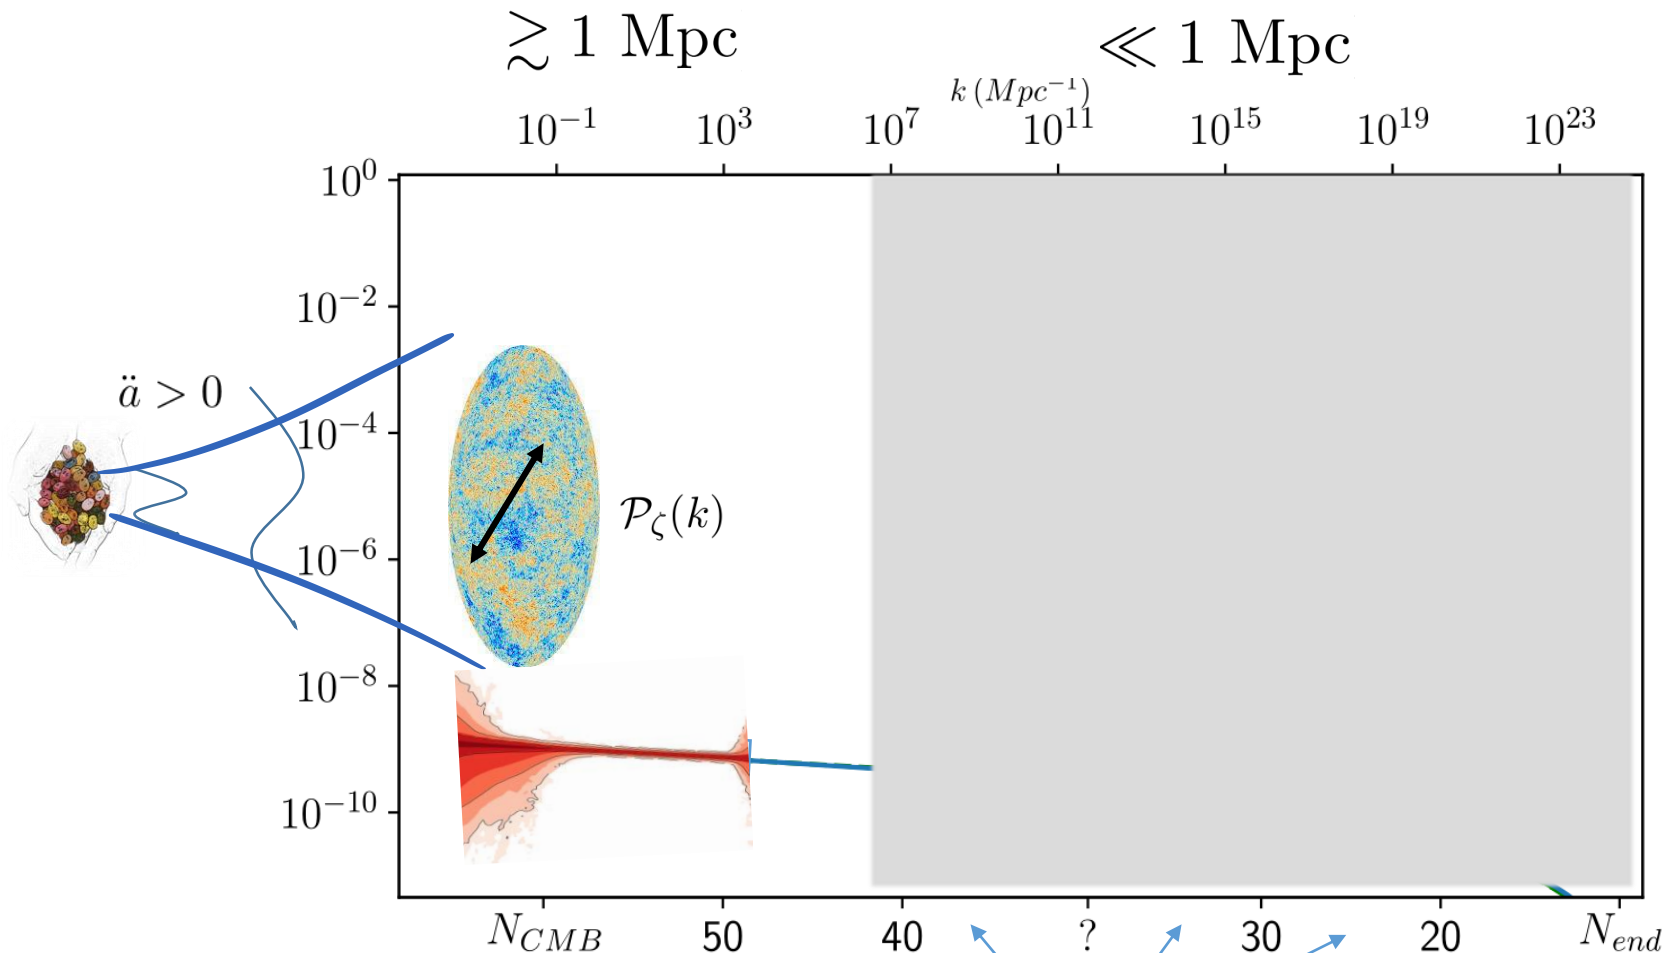

.. might be seen in future GW detector !

SGWB FROM INFLATION AT SMALL SCALES

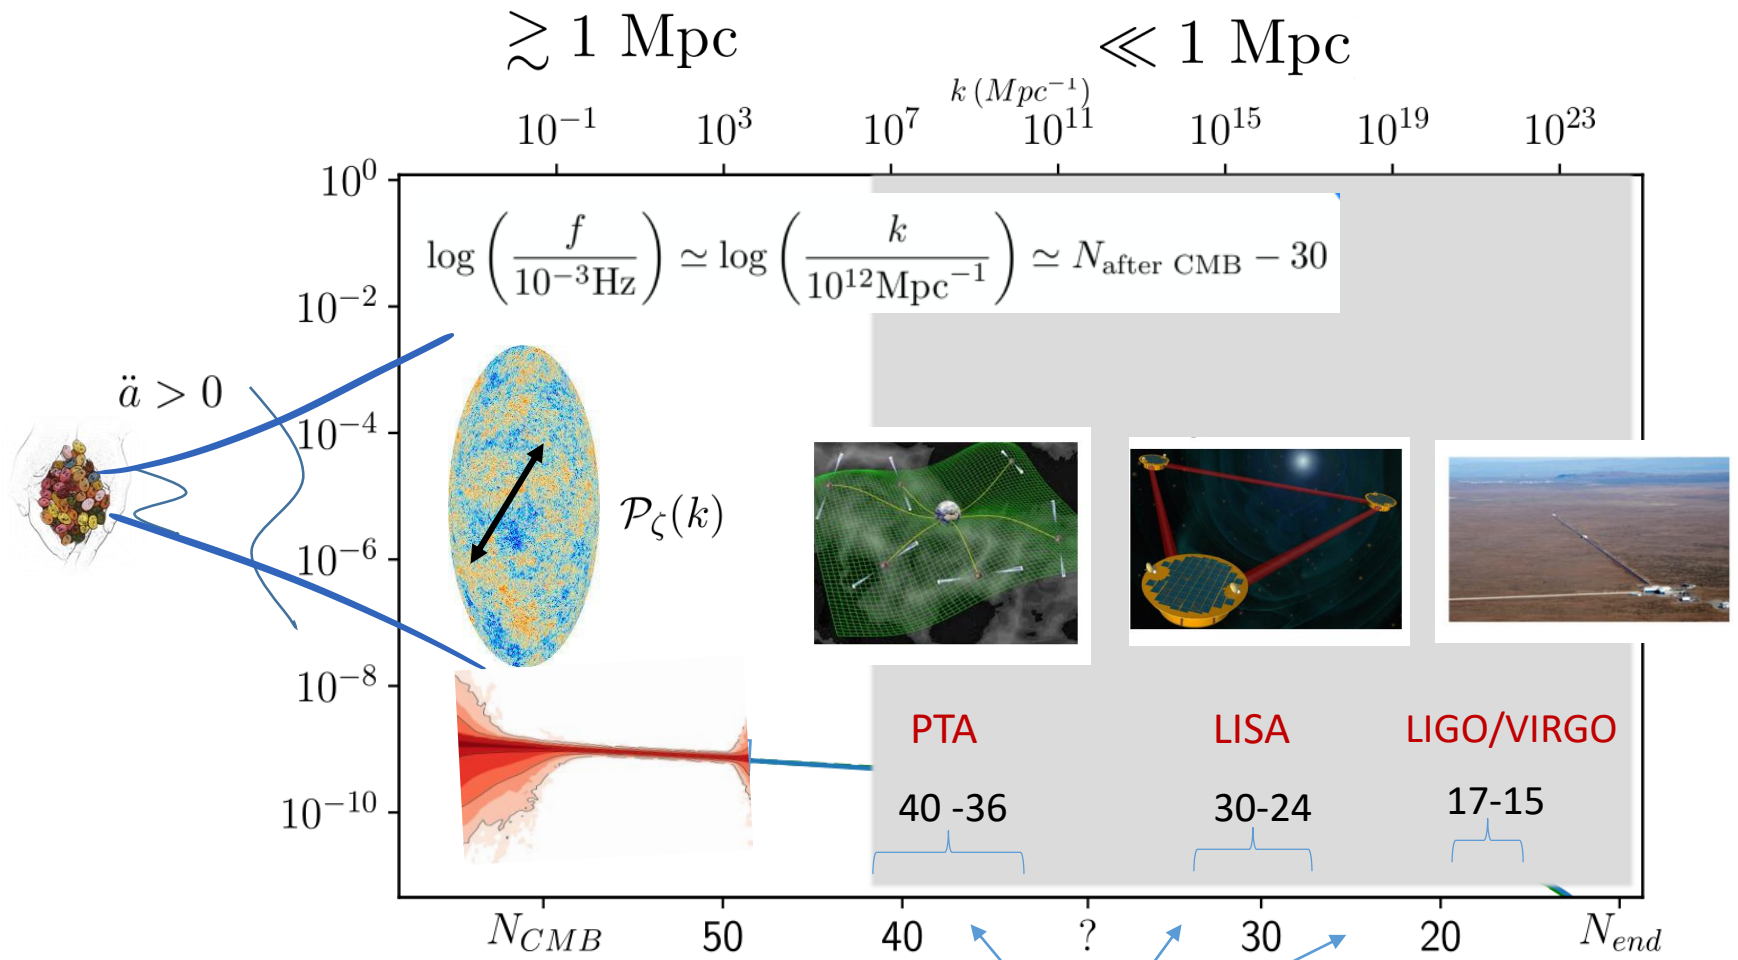

SGWB FROM INFLATION AT SMALL SCALES

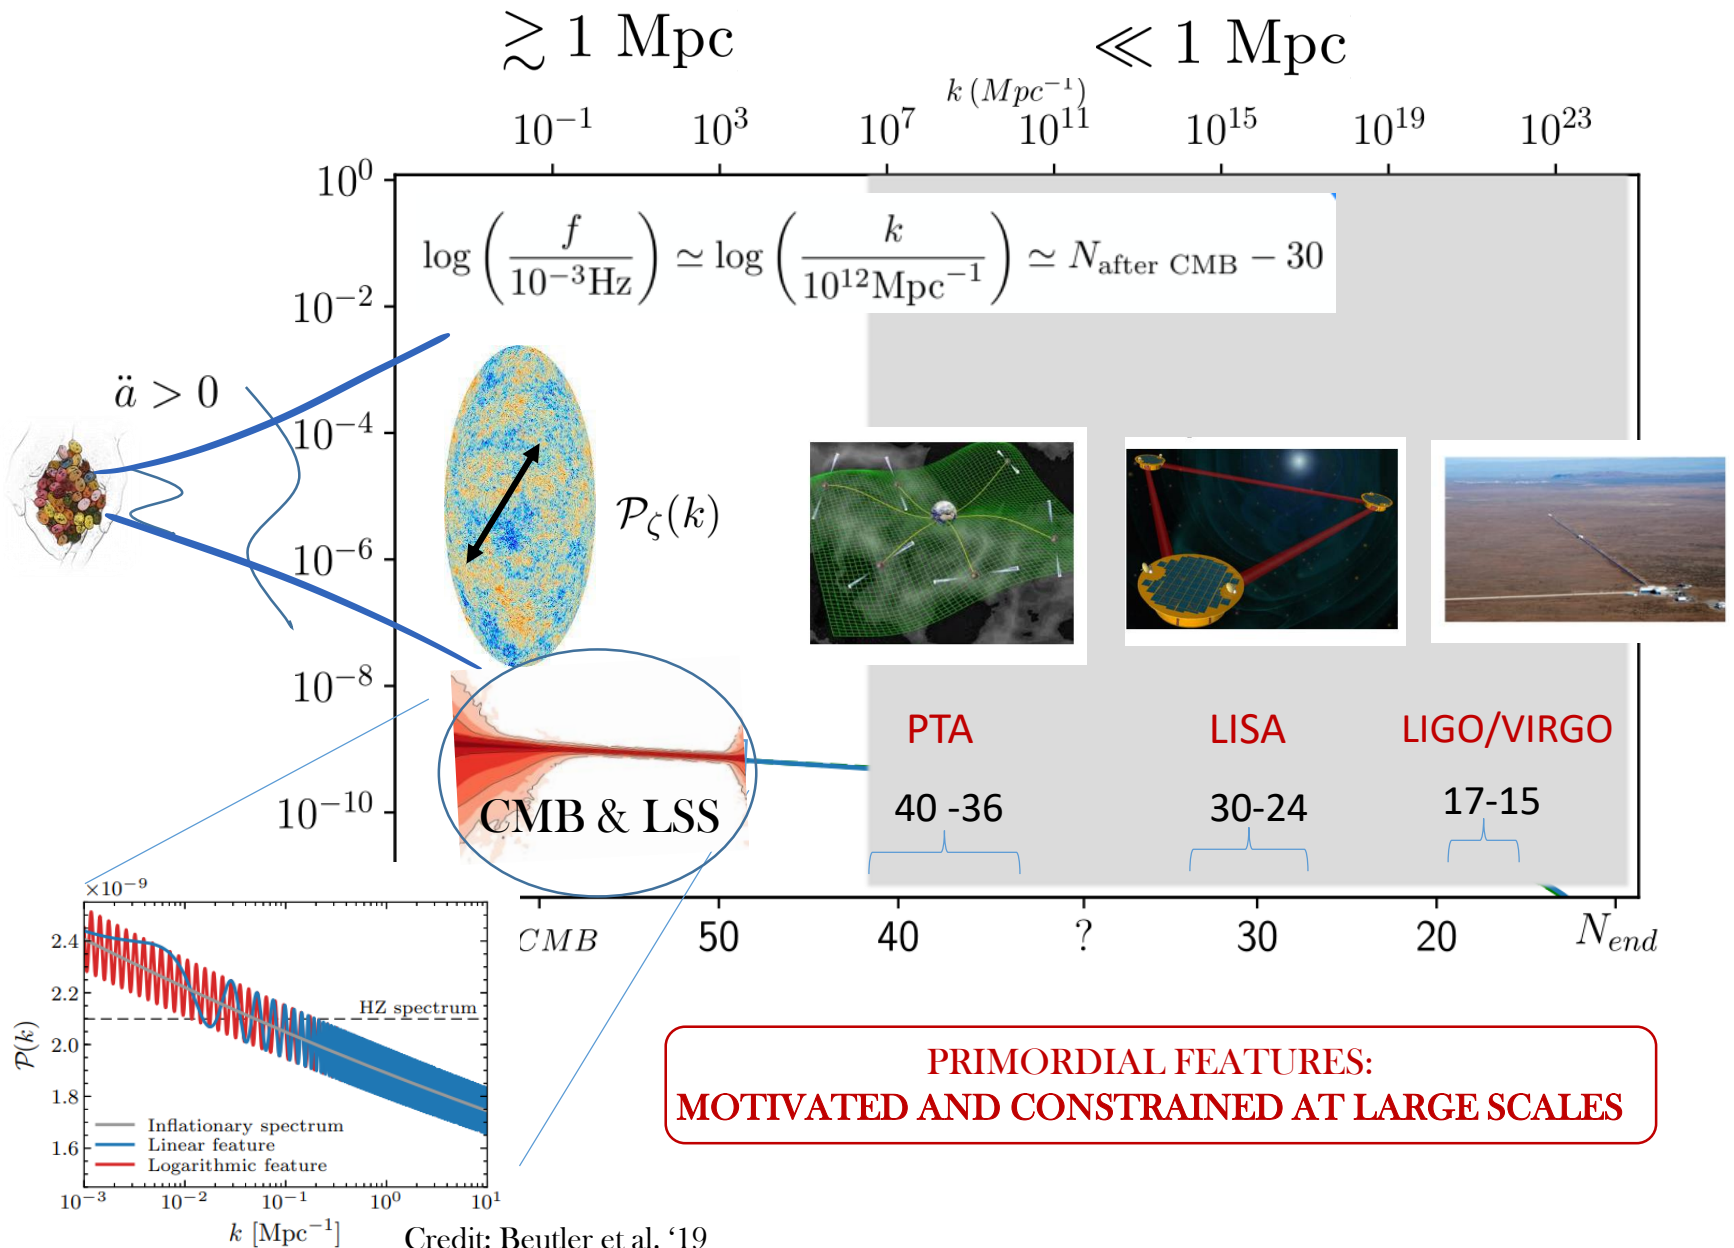

**PRIMORDIAL FEATURES AT SMALL SCALES AND
THEIR IMPRINTS ON THE SGWB**

SGWB FROM INFLATION AT SMALL SCALES

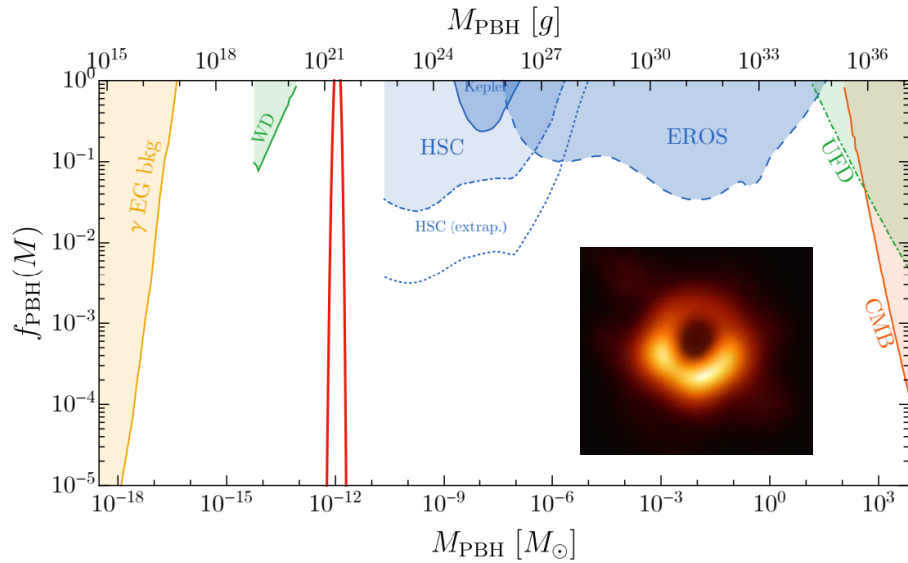

PRIMORDIAL FEATURES AT SMALL SCALES AND
 THEIR IMPRINTS ON THE SGWB

SGWB FROM INFLATION AT SMALL SCALES

PBH / SGWB & LISA COINCIDENCE

$$\Omega_{\text{GW}}(k) \propto \int \int I(u, v) \mathcal{P}_{\zeta}(ku) \mathcal{P}_{\zeta}(kv)$$

$$\mathcal{P}_{\zeta} = A_p \delta(\log k/k_{\star})$$

LISA Serendipity
Bartolo et al. '18

EXAMPLE: SHARP FEATURES & SIGNATURES IN THE SGWB

$$\Omega_{\text{GW}}(k) = \bar{\Omega}_{\text{GW}} \left(1 + \mathcal{A}_{\text{lin}} \cos(\omega_{\text{lin}}^{\text{GW}} k + \varphi_{\text{lin}}) \right)$$

$$\omega_{\text{lin}}^{\text{GW}} = \sqrt{3} \omega_{\text{lin}}$$

**GENERIC PREDICTION:
LINEAR OSCILLATIONS IN
THE SGWB**

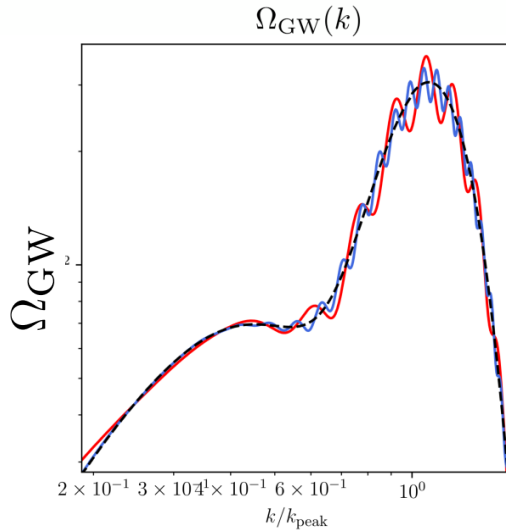

We could learn:
Energy scale/ when and for
how long during inflation?
More..

MORE: SMALL SCALE FEATURES in the SGWB

FEATURES IN THE PRIMORDIAL FLUCTUATIONS IMPRINT
UNIQUE OSCILLATORY PATTERNS TO THE SGWB

SHARP FEATURES

RESONANT FEATURES

JF et al.

- 2012.02761,
- 2105.06481,
- 2110.09480,
- 2111.14664,
- 2112.06903

...

PERTURBATIVITY & OBSERVATIONS

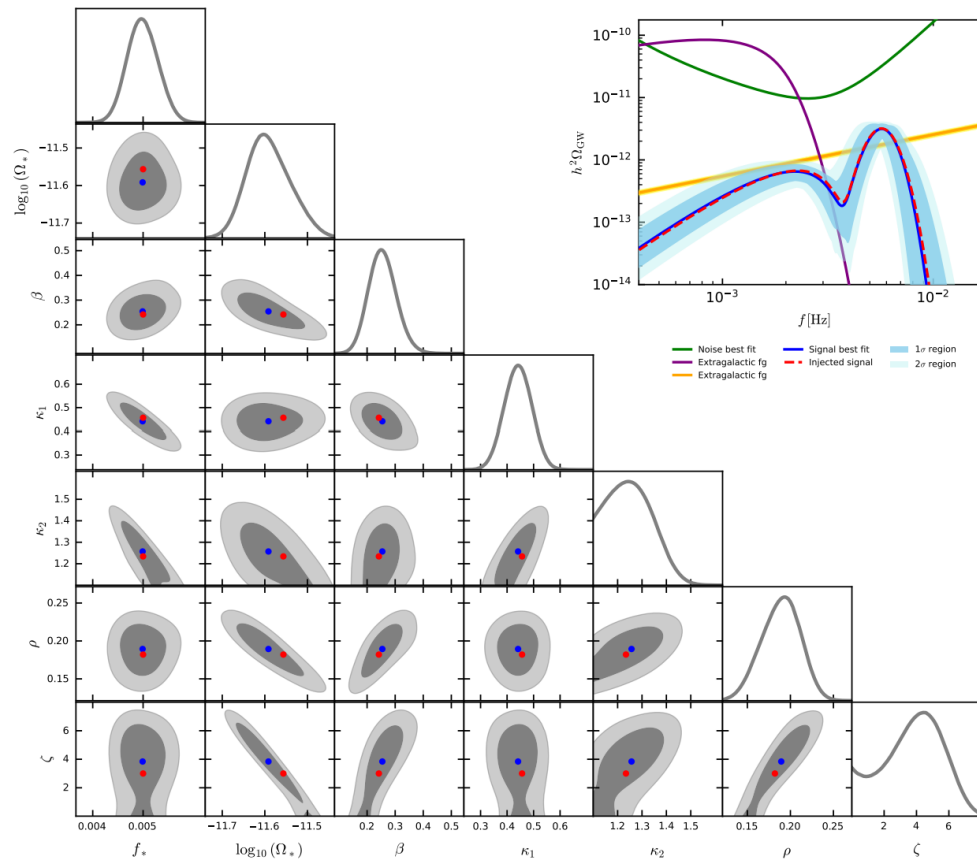

Theoretical scenarios may be tightly constrained just from perturbativity requirements. (One example from [2111.14664](#))

...more recent issues in the literature about one-loop corrections

SEARCHING FOR FEATURES in LISA (with LISA CosWG)

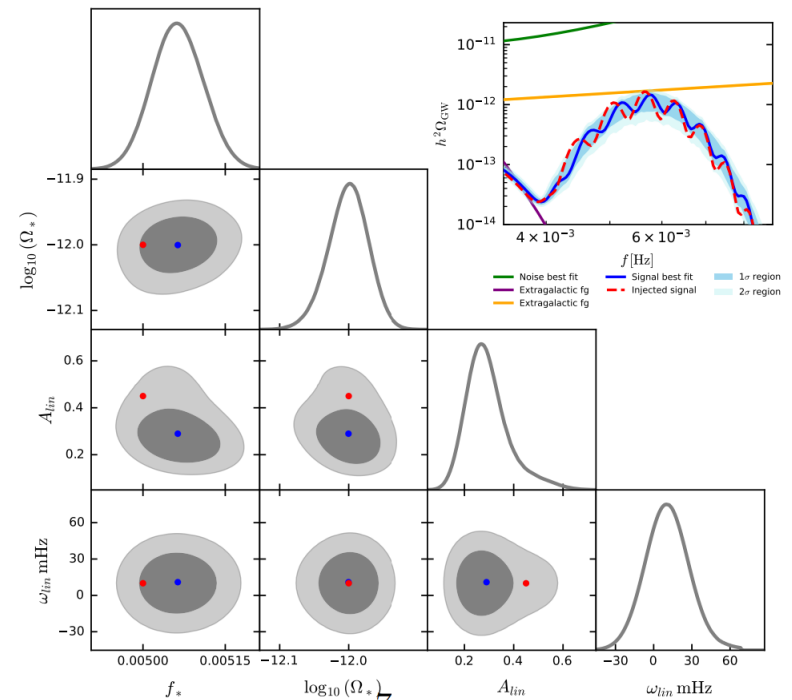

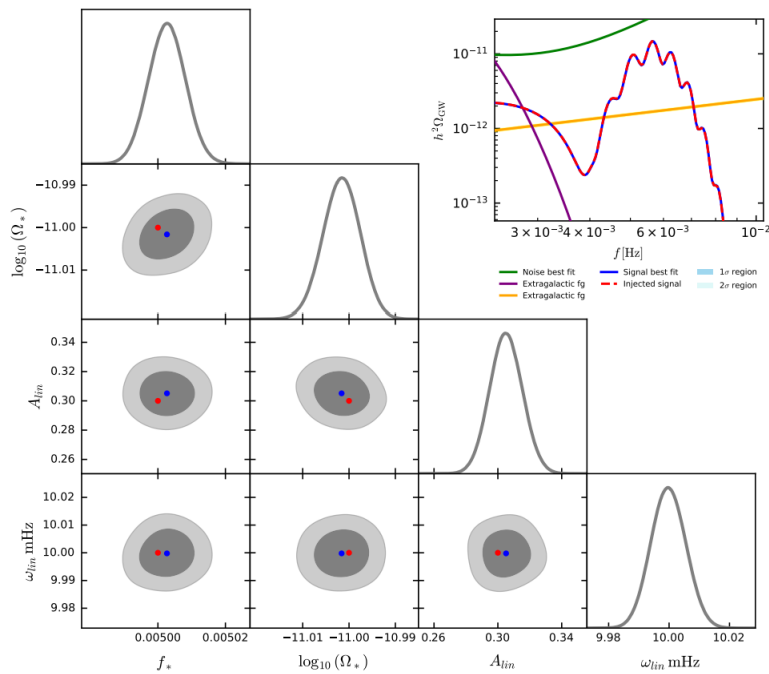

Example: PEAK IN THE SPECTRUM

PRELIMINARY

SEARCHING FOR FEATURES in LISA (with LISA CosWG)

Example: OSCILLATIONS IN THE SPECTRUM

PRELIMINARY

CONCLUSIONS

- Stochastic gravitational wave background has the potential to unveil new physics not reachable by any other means
- It provides a new window to test inflation at small scales
- Reasons to go beyond the vanilla inflationary scenarios lead to features in the SGWB

Huge amount of information hidden behind

IT MAY BE REWARDING TO LOOK FOR
OSCILLATORY PATTERN IN THE SGWB

QUESTIONS:

- Detectability with LISA and other GWs observatories

To what extend we can reconstruct 10%-20% oscillations?

- Building consistent theoretical frameworks - one loop corrections
- Determine shapes / features unique of a cosmological background
- How to differentiate between cosmological and astrophysical background
- How to reconstruct the shape of a signal from its anisotropies
- Synergies among network of detectors

.....
