## Progress of the Super Tau Charm Facility in China

*Tuesday 9 July 2024 14:40 (20 minutes)*

The Super Tau Charm Facility (STCF), a planned symmetric electron-positron collider in China, aims to facilitate  $e^+e^-$  collisions across a center-of-mass energy range of 2 to 7 GeV, targeting a peak luminosity of  $0.5 \times 10^{35} \text{ cm}^{-2} \text{ s}^{-1}$ . With an anticipated annual integrated luminosity exceeding  $1 \text{ ab}^{-1}$ , the STCF is poised to generate vast datasets. These will enable precision measurements of XYZ particles' properties, exploration of new CP violation sources within strange-hyperon and tau-lepton sectors, and accurate Cabibbo angle ( $\theta_c$ ) measurements to test the unitarity of the CKM matrix; search for anomalous decays with sensitivities extending down to the level of SM-model expectations, among other objectives. This talk will cover the STCF's physics goals and outline the latest advancements in the project's R&D.

### **session**

A. Facilities and Detectors

**Primary authors:** Prof. PENG, Haiping (University of Science and Technology of China); WANG, Yadi

**Presenter:** WANG, Yadi

**Session Classification:** A. Facilities and Detectors
